MATCHROOM

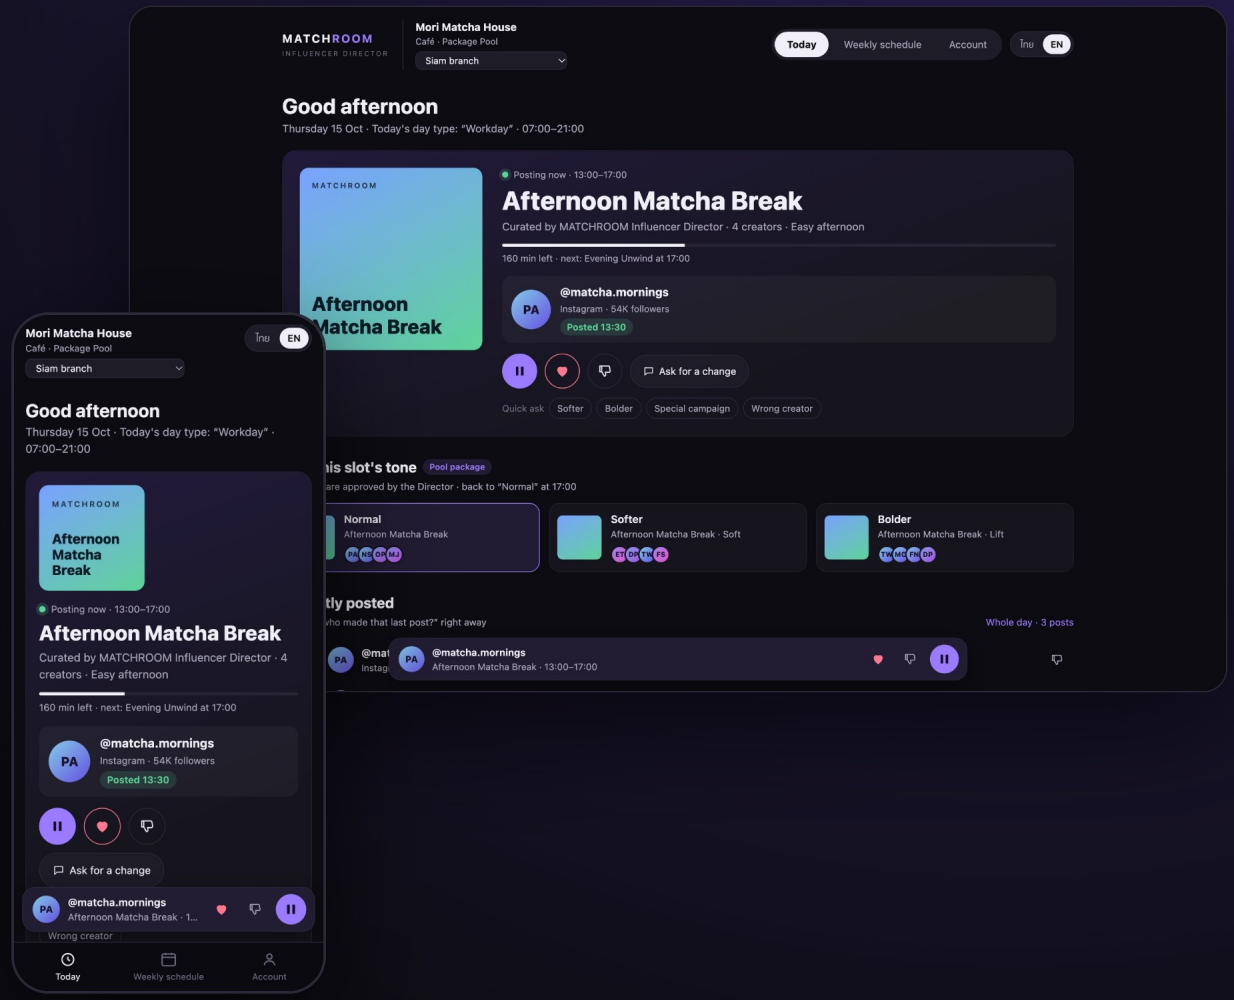

Influencer Director

Creators a Director picks and runs for every brand, week by week, with AI help and a guardrail on every number

Built on the **Music Director** model

Mockup · **15 Oct 2026**

All data **fictional**

The problem

Influencer posts are still picked by hand, one campaign at a time

Gut feel

Picked by follower count

No plan by time of day, no rotation, and no record of who posted when or what it cost.

Brand risk

Rule breaks slip through

An alcohol creator on a family brand, or one under exclusive contract with a rival, is caught late, if at all.

AI risk

Tools that make things up

Chat assistants can suggest creators who don’t exist and quote follower counts nobody can check.

What brands need: someone who runs it every week, by rules they can see.

The idea

We direct.
The brand watches.

MATCHROOM runs a weekly influencer program for every brand, the way VIBES LAB Music Director runs the music for every shop. The brand never picks creators; a Director does, with AI help.

Same model

Every piece of Music Director has a match

Piece	Music Director	MATCHROOM
Who we serve	Shops, hotels, cafés	Brands
Catalogue	Song library with track profiles	Creator roster with creator profiles
One slot holds	A playlist that loops till the slot ends	A shortlist; one creator posts per day
The week	Day types × time slots	Day types × posting slots
Client feedback	Like · Not this song · Ask	Like · Not this creator · Ask
Pool (premium)	Normal · Softer · Livelier	Normal · Softer · Bolder
Compliance	Music licence (MPC)	Content rights & ad disclosure
Money report	Royalties by label	Creator fees by agency

Inside the engine: BPM → ER · the brand's scent → the brand signature · the artist cap → an agency cap

How it works

From brand rules to a published week

1

Brand profile

VIBES, audience, signature tags, and rules a computer can check.

2

Day types × slots

Workday, weekend… Slots run open to close, each with a tone.

3

One shortlist per slot

3–4 creators take turns: one post per slot per day.

4

AI drafts, Director approves

One engine ranks the roster. Nothing reaches the brand unapproved.

5

Publish

The brand sees next week's timetable; creators post on schedule.

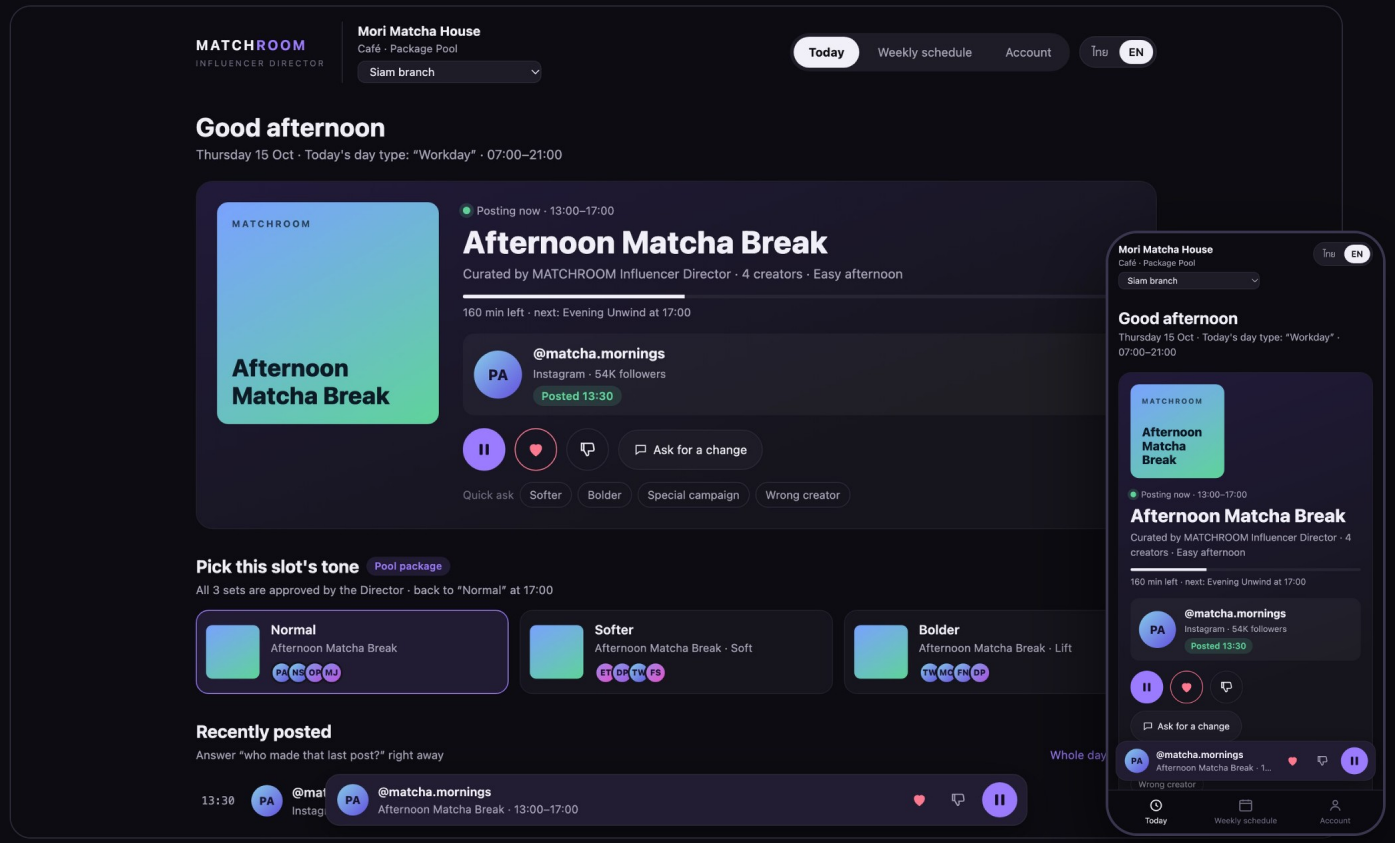

6

Report and pay

Posts, on-time rate and creator fees by agency, from open formulas.

Brand side · Today

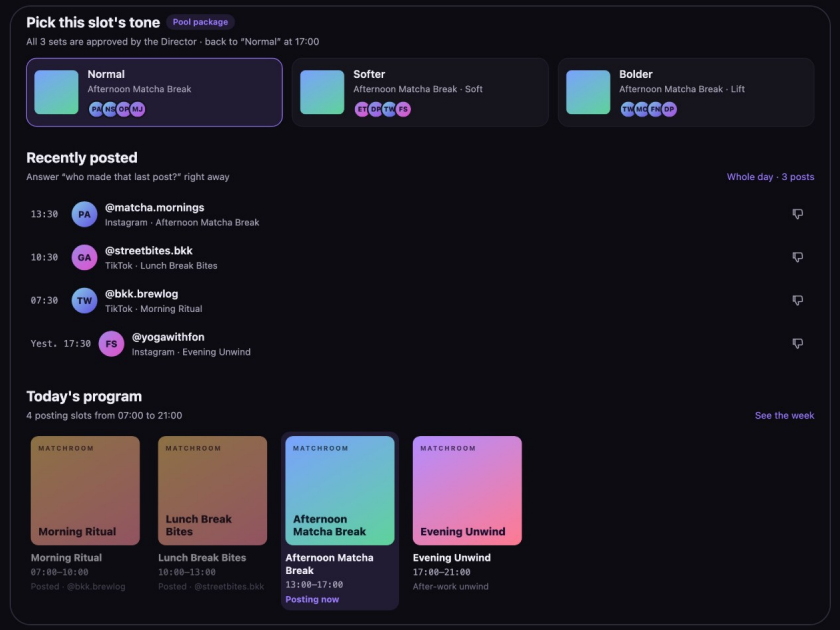

Open it and see who is posting, right now

1. **Live on real time**
   The slot on now, who posts, minutes left, what's next
2. **Hold in one tap**
   Pause posting; the Studio sees it live
3. **Today's program**
   Daylist cards from open to close
4. **Recently posted**
   Answer "who posted that?" at once

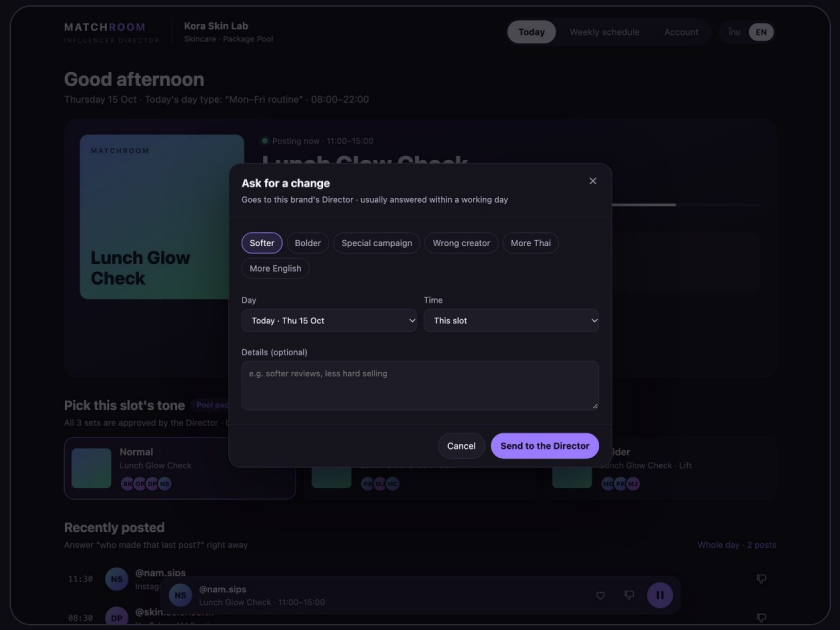

Brand side · Feedback

Feedback: two taps, or ask the Director

Pool: pick a tone (premium)

Normal, softer or bolder: three sets the Director already approved. Back to normal when the slot ends.

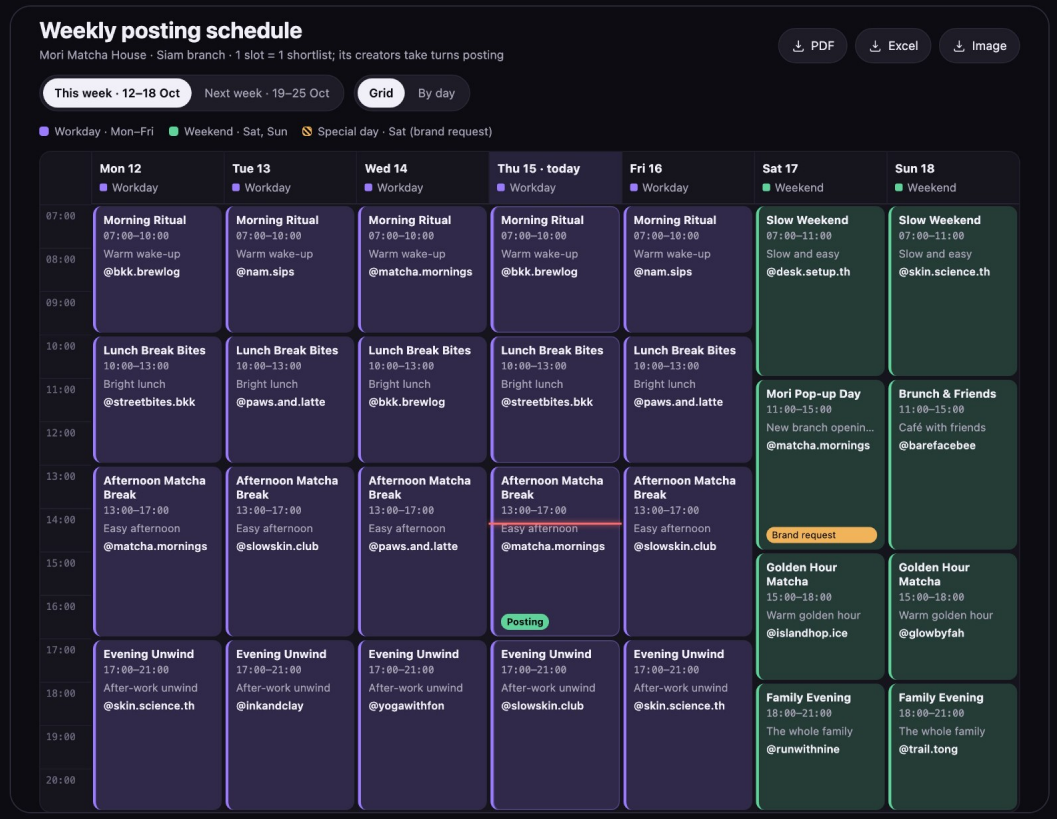

Like, not this creator, or ask

"Not this creator" skips them now and never again for this brand. Requests land in the Studio queue.

Brand side · Weekly schedule

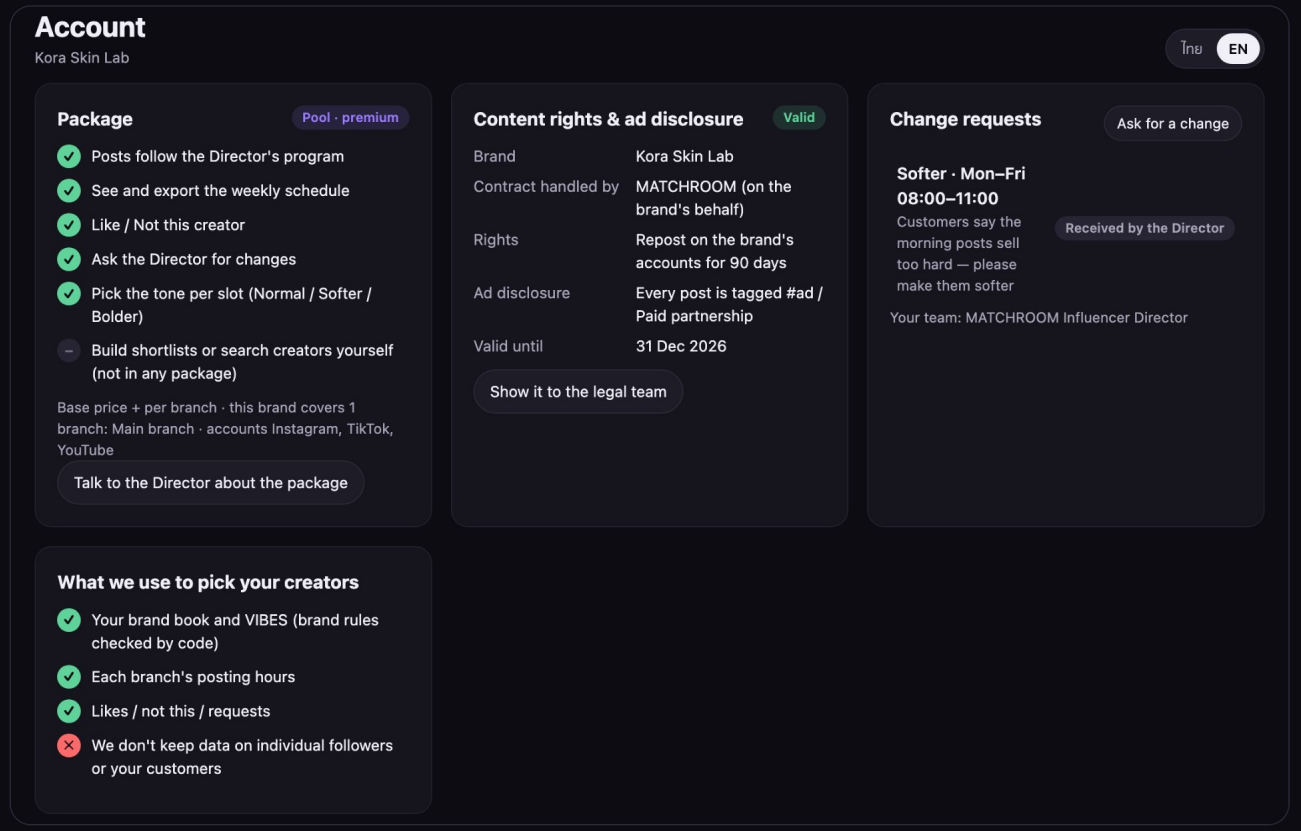

The week at a glance, like a timetable

1. **Hours down, days across**
   Each cell is one shortlist and shows who posts that day
2. **Day types in colour**
   Workday, weekend and the brand's special day
3. **Next week, once published**
   Before that, the brand sees a "preparing" note
4. **PDF, Excel or image**
   Excel has two sheets; the PDF prints on A4

Brand side · Account

What the brand gets, and what we keep

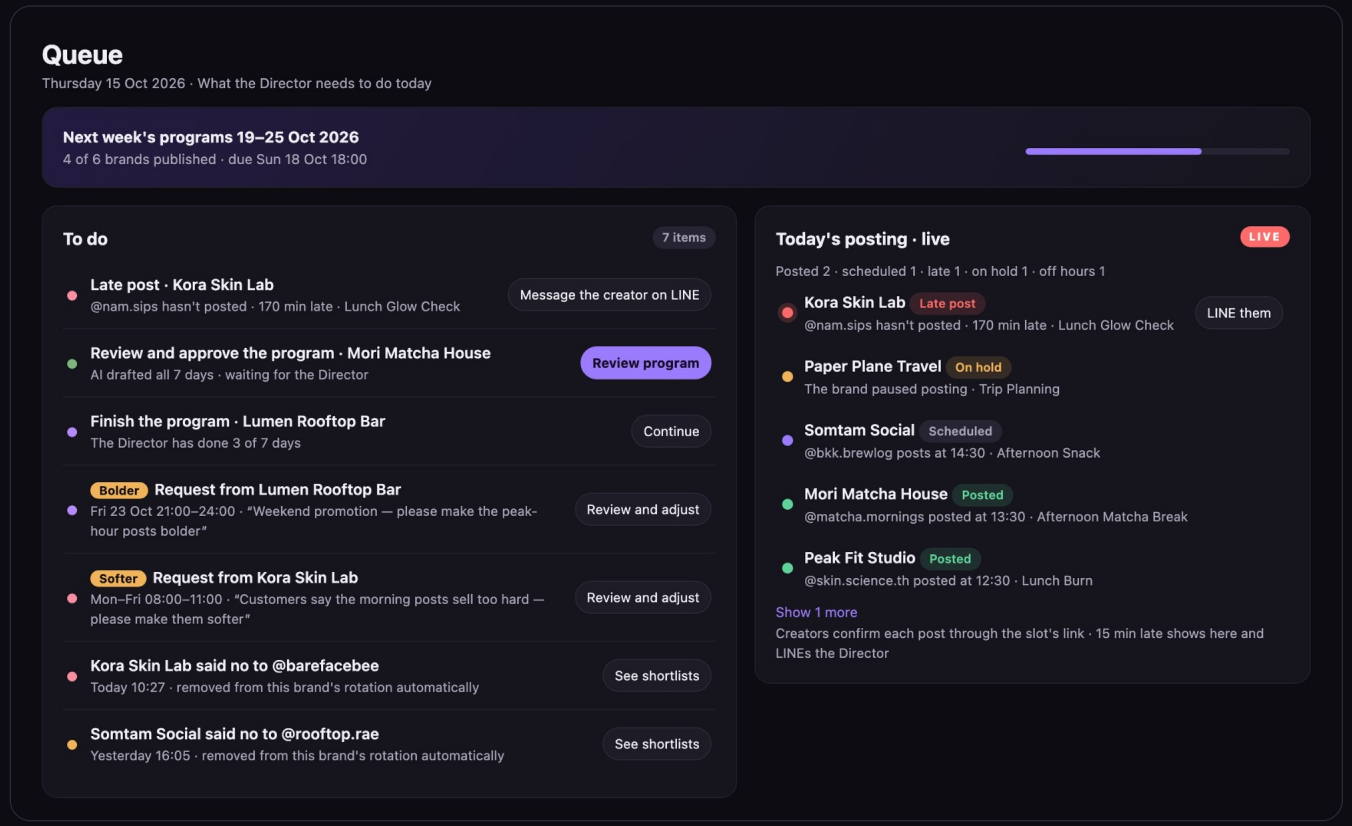

1 **Package**
What it includes. No package lets the brand pick creators

2 **Rights & ad disclosure**
A sample certificate to show the brand's legal team

3 **Only the data we need**
Brand book, posting hours, likes and requests. No followers' personal data

Studio · Queue

What the Director must do today

1. **Next week's progress**
   Brands published so far, due Sunday
2. **To-dos in order**
   Late posts, reviews, drafts and requests
3. **Live posting status**
   Posted, waiting, late or paused, per brand
4. **Nudge on LINE**
   Ping a late creator in one tap

AI drafts the week, the Director approves

1 Draft → 2 Awaiting review → 3 Published

1 Edits need approval again

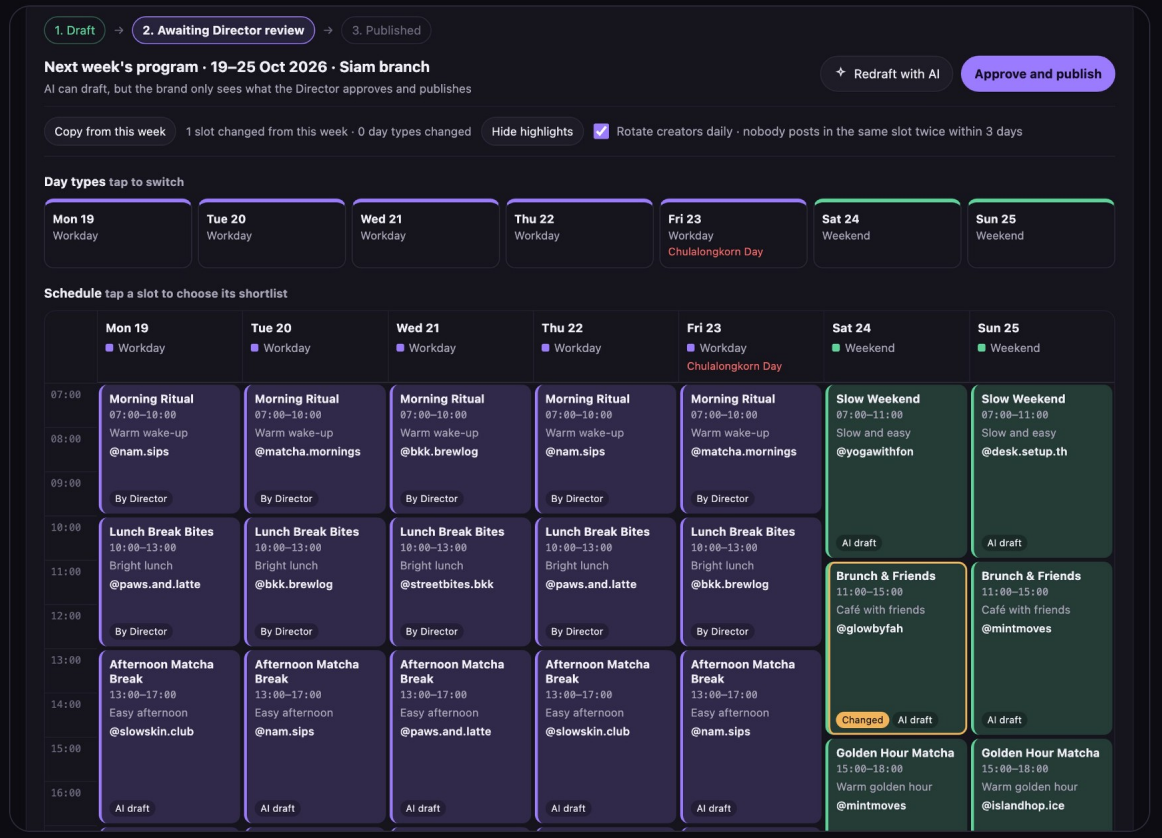

Change a published slot or day type and it goes back to review

2 Day types per day

Tap a day to switch; copy this week in one click

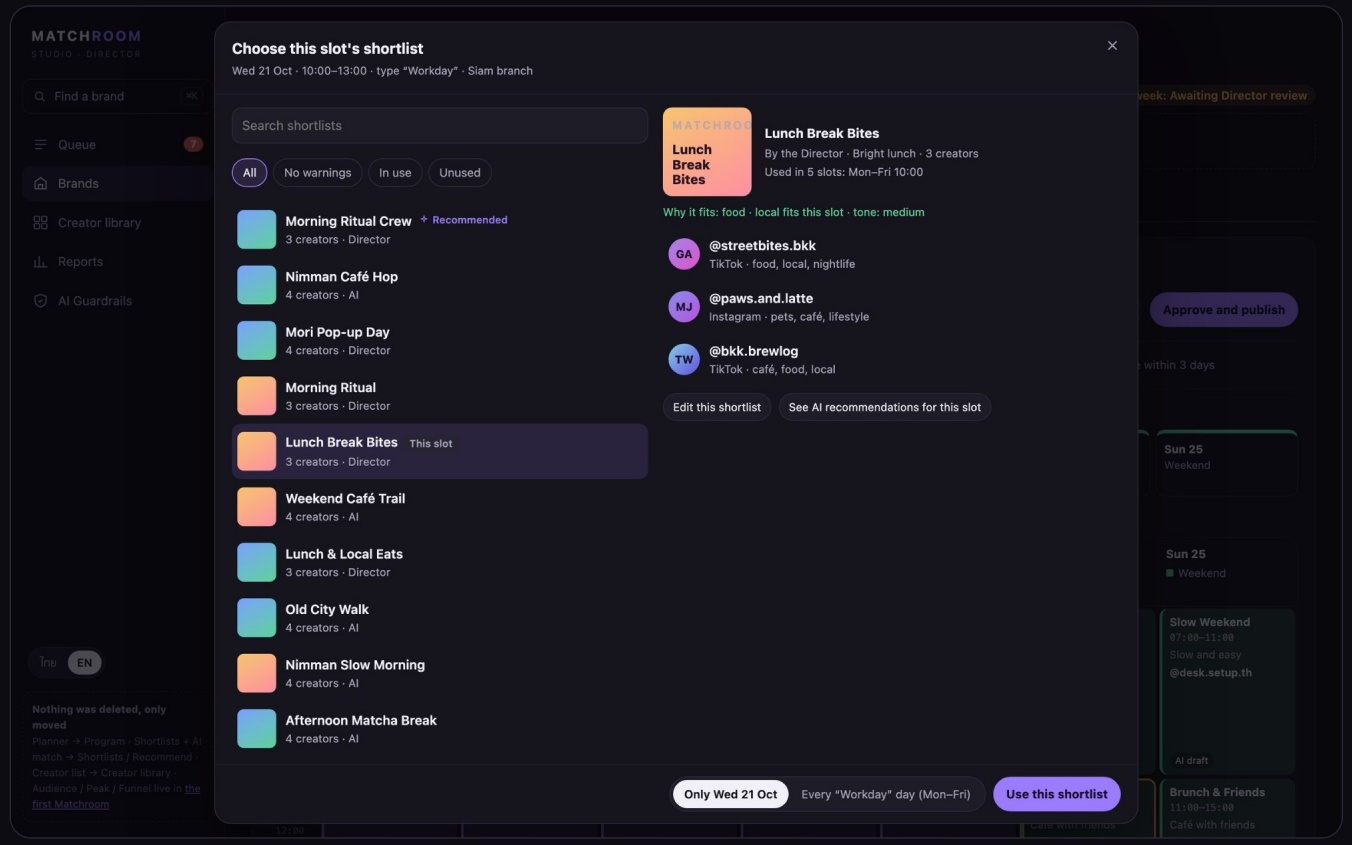

3 Holidays and festivals

A holiday suggests the relaxed day type; 11.11 gets a festive shortlist

Studio · Slot picker

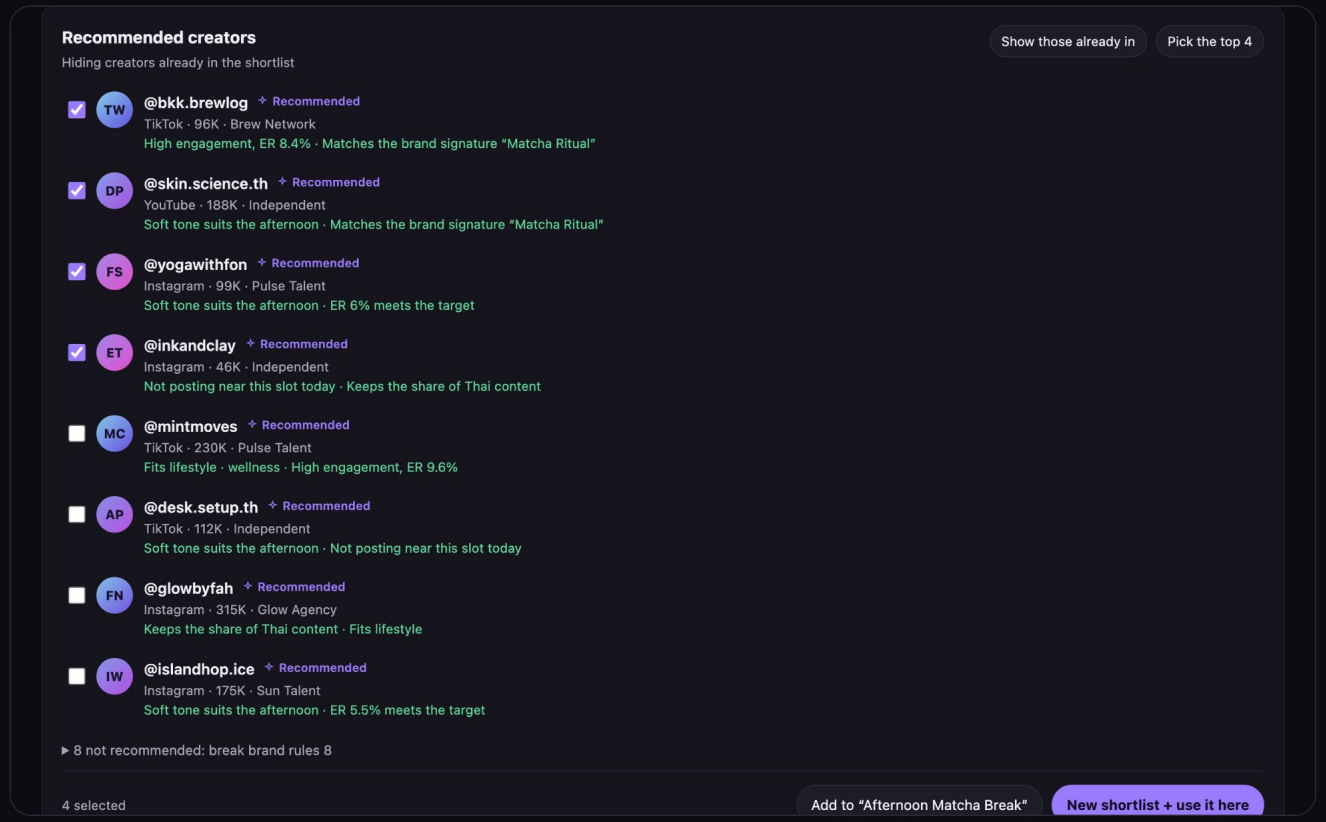

Pick a shortlist: a reason, never a score

1. **A "Recommended" tag**
   The score stays inside the engine
2. **Reasons in words**
   Which content tags fit, and the tone
3. **Warnings in words**
   "Made for the morning", or a rule break
4. **One day, or every day**
   Apply to one date or the whole day type

Studio · Recommend

AI suggests creators, the Director acts

1. **What the slot needs**
   Tags, tone, ER target, Thai share
2. **An optional brief**
   Type "softer", or tap a chip
3. **Add, or create**
   Into the slot's shortlist, or a new one
4. **Why others are out**
   Each excluded creator has a reason

The engine

One engine, Music Director's weights

1 · Filter
Brand rules, "not this", rate cap

→

2 · Score 7 parts
Each 0–1, weighted below

→

3 · Re-rank
Agency cap, Thai share

Part	Weight	Music Director	MATCHROOM
Fit	×3	Mood tags	Content tags, by tag confidence
Tone	×2	Energy 1–5	Content intensity 1–5
Range	×2	BPM in the slot's range	ER at or above the slot's target
Brand	×2	Fits the brand's scent	Fits the brand signature
History	×2	Likes and dislikes	Likes; same-day nearby posts lower
Language	×1	Thai-language share	Thai-content share
Trend	×1	Views, likes, growth (opt-in)	Followers, ER, growth (opt-in)

Rotation

Rules that keep every feed fresh

Rotate daily

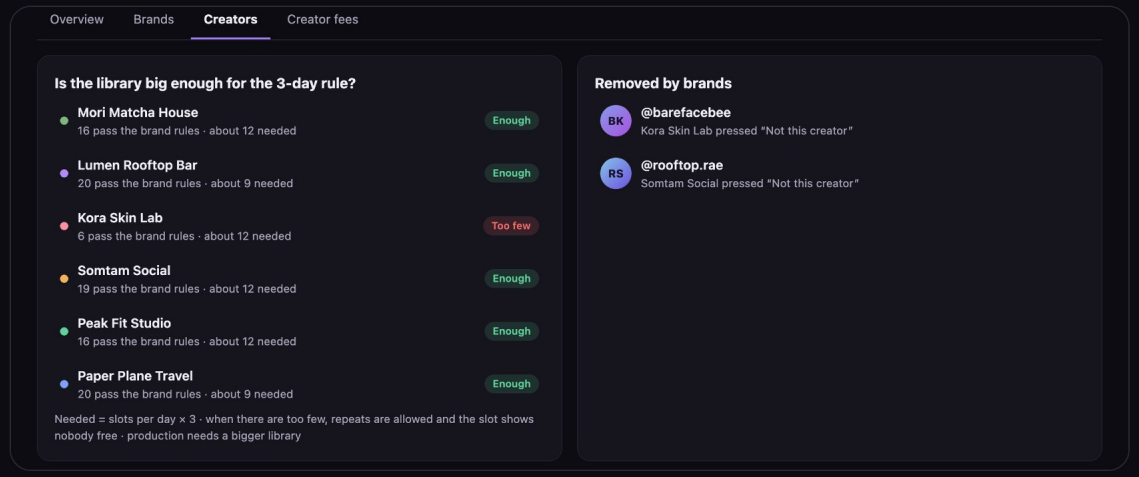

Creators in a shortlist take turns, one post per slot per day.

No repeats

Never the same slot within 3 days, never twice in one day.

Spread the mix

At most 2 per agency, never back to back; keep the Thai share.

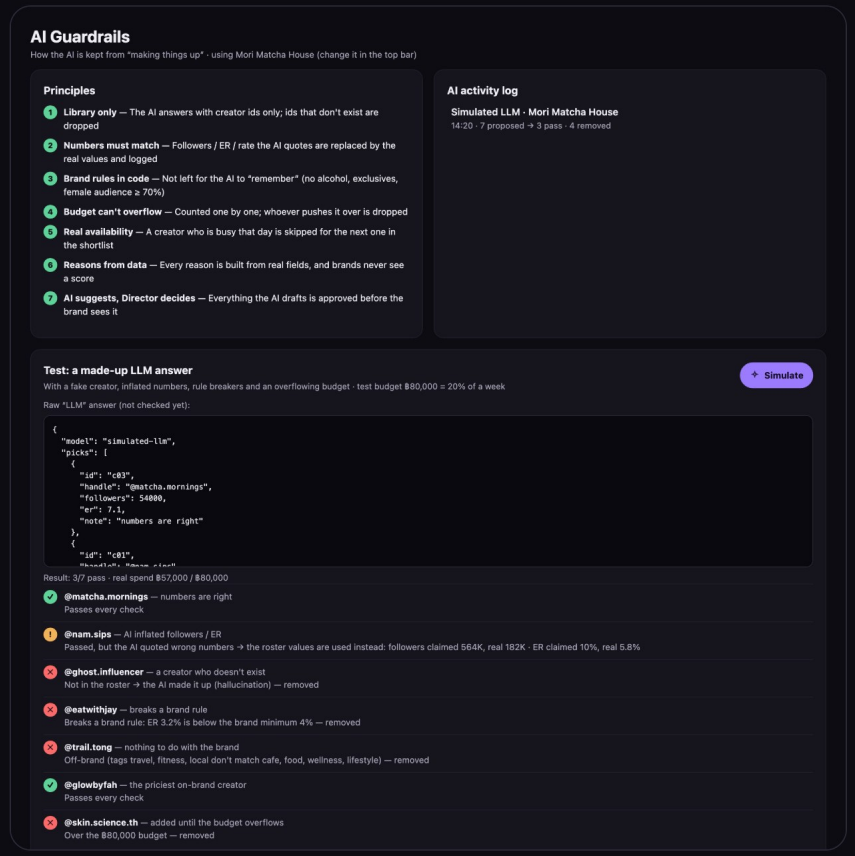

Honest about limits

Kora Skin Lab's strict rules leave 6 creators; the rule needs about 12. Reports flags it instead of hiding the repeats.

Guardrails

AI can’t make up creators or numbers

Only from the roster. Unknown ids are dropped.

Numbers must match. Misquoted stats are replaced and logged.

Rules checked by code. Alcohol, exclusives, audience share.

Budget counted one by one. Whoever tips it over is cut.

Real availability. A creator who is off that day is skipped.

Reasons from real fields. Brands never see a score.

The Director decides. Nothing AI-drafted reaches a brand unapproved.

Packages

Two packages; nobody picks creators

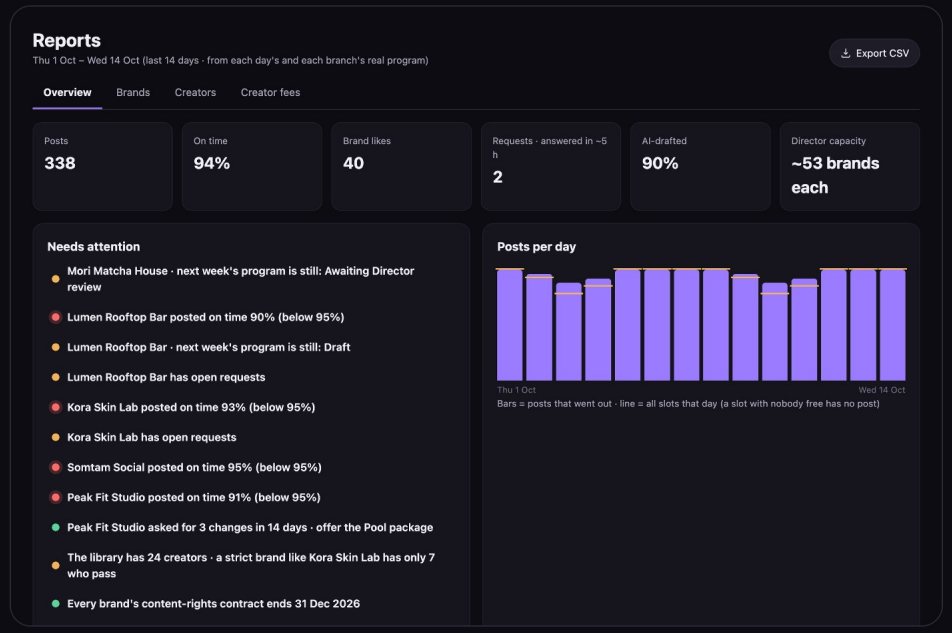

What the brand gets	Autopilot · base	Pool · premium
Posts follow the Director's program	Yes	Yes
See and export the weekly timetable	Yes	Yes
Like, and "not this creator"	Yes	Yes
Ask the Director for a change	Yes	Yes
Pick a tone per slot (normal / softer / bolder)	No	Yes
Pick creators or build shortlists	No	No

Price: [฿__ / month] base, plus [฿__] per extra brand account

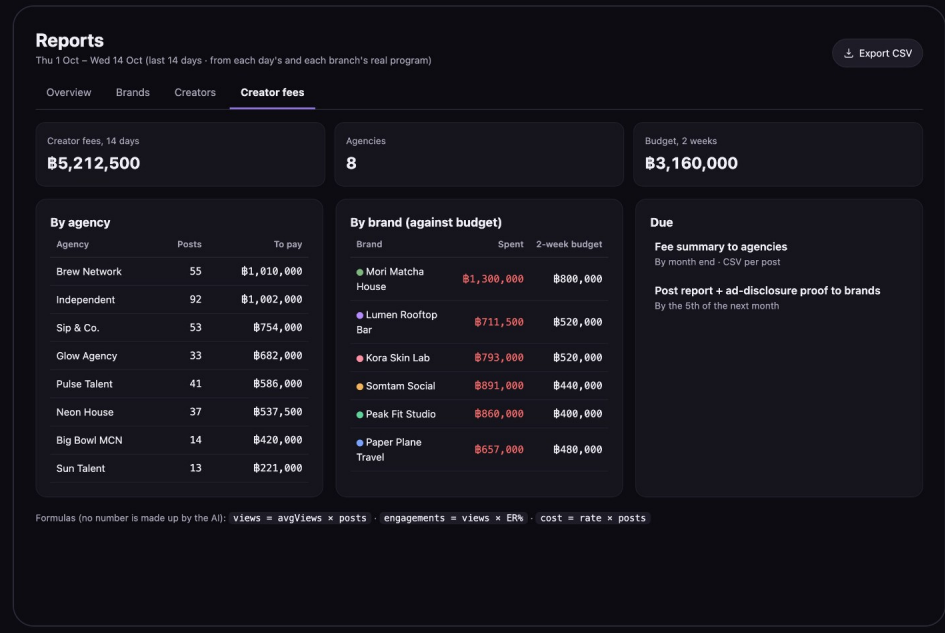

Not set yet. Music Director's pitch uses ฿5,000 a month as its base scenario.

Studio · Reports

Every number traces back to the roster

Overview and alerts

Creator fees by agency

```
views = avg views × posts · engagements = views × ER · fees = rate × posts
```

Status

What works today, and what is simulated

Works in the mockup

- Brand side and the full Studio
- Draft → review → publish, with re-approval
- One engine and its guardrails
- Branches per brand
- Thai / English switch
- Excel, CSV; PDF by printing
- 140 click-through checks

Simulated

- Posting and post times
- LINE messages
- Image export
- All data is fictional
- Nothing is saved; a refresh resets

Next

- Real creator data with consent
- Paid AI that doesn't train on client data
- A pilot with one brand

The first version (9 Oct) stays untouched in its classic folder, the way Music Director keeps /classic.

Next

Decisions to make

1. **Position**
   An internal proof that the Music Director model travels, or a second service line? [decide]
2. **Pricing**
   [฿__ / month] base, plus [฿__] per extra account; creator fees bundled or billed separately
3. **Pilot brand**
   [Brand name] for a [__]-week trial
4. **Creator data and consent**
   Where creator profiles come from, and how creators agree to be listed (PDPA)
5. **AI provider**
   A paid API that doesn't train on client data, as planned for Music Director
