PROJECT · OCTOBER 2026

An AI sales assistant on LINE

How a chat workflow built on n8n, Google Sheets and Gemini answers product questions, recommends scents and closes the sale with a checkout link.

PUBLISH - TKP

THE STARTING POINT

Where chats were getting stuck

01

Answers ended the chat

19 of 42 everyday answers had no follow-up question, so customers had nowhere to go next.

02

Buying led to a loop

“I’ll take it” → “50 ml” → “1 bottle”, and the bot repeated the same scent description each time.

03

Checkout was a dead end

Ready buyers were told an admin had to confirm, with no way to place the order.

> Goal: a warm, honest assistant that guides every chat toward a purchase.

WHAT CHANGED

Four improvements, one conversation

Warm, guided replies

34 FAQ answers rewritten in a polite female voice, each ending with one question that moves the chat on.

Checkout inside the chat

Scent → size → quantity → a product link with the chosen size already selected.

Live stock awareness

Sold-out sizes are named plainly, and another size or a similar in-stock scent is offered.

Safe to change

Built on a copy of the workflow, backed up at every step and tested in a conversation simulator.

TECH STACK

Six building blocks

LINE Messaging API

The customer channel: messages arrive by webhook, replies go back through the reply API.

n8n Cloud

The workflow engine: 96 nodes, with most logic in JavaScript Code nodes.

Google Sheets

60 reviewed FAQ answers, plus each customer's conversation state.

Google Gemini

Reads only the messages the rules can't; it never writes the reply.

Online store feed

The public product feed gives live stock and a link for each size.

Claude Code

Explored, edited and tested the workflow through the n8n API.

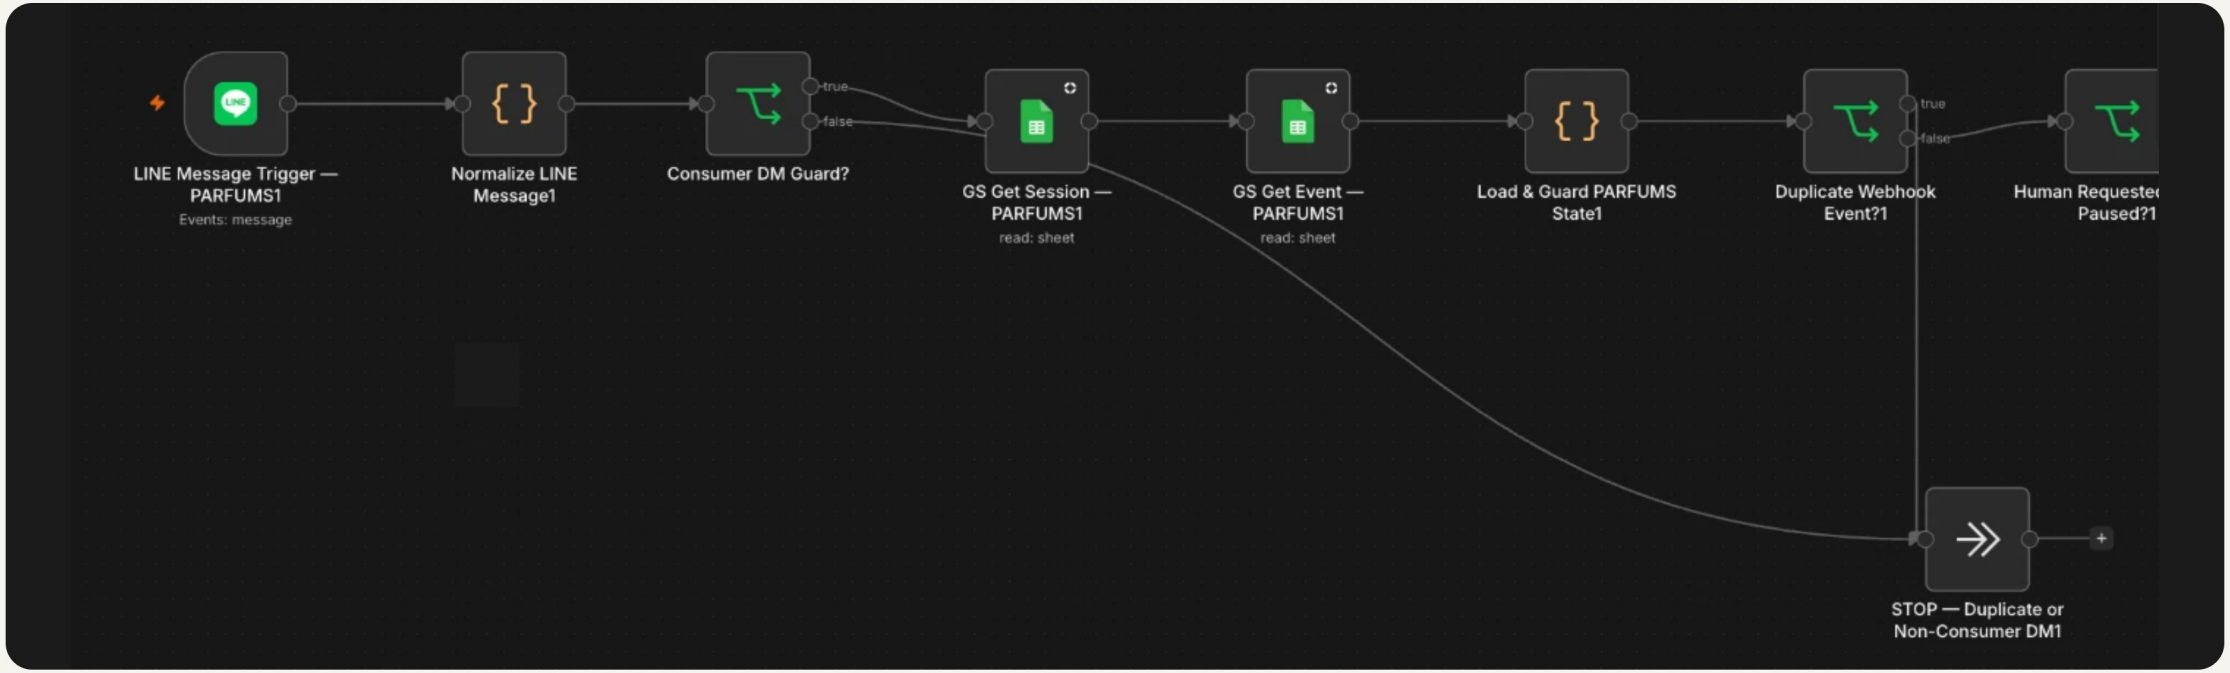

HOW IT WORKS

From a LINE message to a checkout link

UNDER THE HOOD

Inside the n8n workflow

96 nodes

69 in use

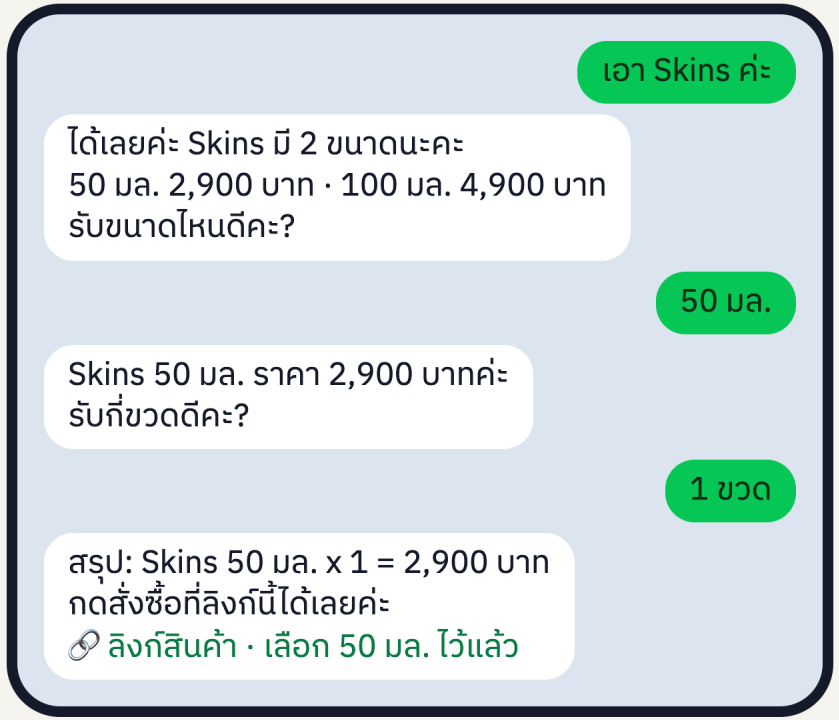

25 JavaScript Code nodes

2 new nodes for live stock

THE SALES JOURNEY

Every reply moves one step closer

1. Learn what they like
2. Recommend one or two scents, with photos
3. Confirm the scent
4. Pick a size, prices shown
5. Pick a quantity
6. **Send the product link, size pre-selected**

BEFORE AND AFTER · TRANSLATED FROM THAI

Same three messages, a different outcome

Before · stuck in a loop

I'll take Pencil.

Pencil is cedar and pine wood, dry and soft, like a freshly sharpened pencil.

100 ml.

Pencil is cedar and pine wood, dry and soft, like a freshly sharpened pencil.

2 bottles.

Pencil is cedar and pine wood, dry and soft, like a freshly sharpened pencil.

After · scent, size, quantity, link

I'll take Pencil.

Sure! Pencil comes in 50 ml (2,900 THB) and 100 ml (4,900 THB). Which size?

100 ml.

Pencil 100 ml is 4,900 THB. How many bottles?

2 bottles.

Pencil 100 ml × 2 = 9,800 THB. Tap to order, 100 ml is already selected. 🔗 Product link

LIVE STOCK

Never send a link to a sold-out size

Whole scent sold out

Say so plainly, then suggest one or two similar scents that are in stock.

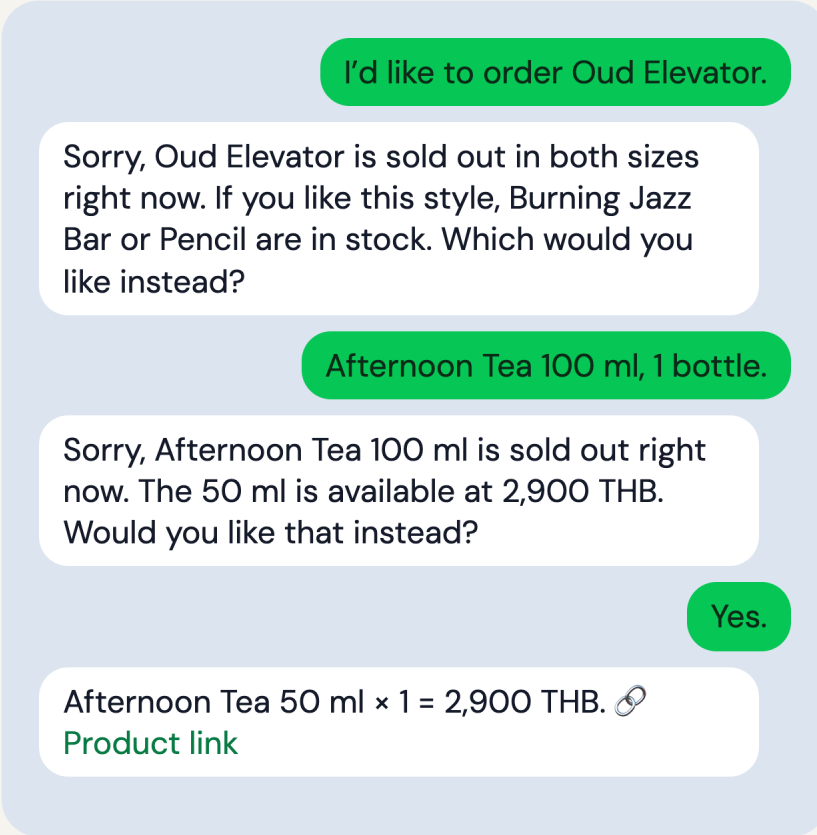

One size sold out

Name the sold-out size and offer the other one at its price.

Store feed unavailable

After a 3-second timeout, reply as before and make no stock claims.

One feed request per message (~0.7 s) · 24 size links verified

GUARDRAILS

Persuasive, but honest

Always

- Quote owner-approved prices only
- Ask one question per reply
- Give the admin contact link for policy questions
- Stop selling when the customer says “let me think”

Never

- Invent stock, shipping, COD or promotions
- Use fake urgency or scarcity
- Claim an admin has been notified
- Make health or longevity claims

Every copy change passes the bot’s own validator before it can be used.

HOW THE WORK WAS DONE

Five safety steps before any customer sees it

0

edits to the original

Clone

All work happens on a copy of the workflow.

12

backups saved

Back up

Workflow and FAQ sheet, before and after each change.

60/60

FAQ rows pass

Validate

The bot's own FAQ compiler checks every answer.

80+

simulated chats, 0 errors

Simulate

Real workflow code, with stand-ins for LINE and Sheets.

58

UAT cases ready

Test on LINE

A short, announced window on the real channel.

NEXT STEPS

What happens next

Now

- Run UAT on LINE in a short, announced window
- Point the webhook at the clone, then restore it

Before go-live

- Fix the 4 open items found in testing
- Owner sign-off on the new FAQ wording
- Decide when to publish and switch the webhook

Later

- Turn on admin alerts for real hand-offs
- Log each checkout link sent as a lead
- Rotate the n8n API key before it expires

> **The assistant is built and tested in simulation; the next milestone is a live test on LINE.**
